

2. Define the Problem Statements

Overview

A problem statement describes the gap between what users need and what they currently get. It keeps the team focused on the right problem while building Weather Wise AI.

Customer Problem Statement Template

Problem	I am	I'm trying to	But	Because	Which makes me feel
PS-1	A daily commuter	Plan my day around the weather	Forecasts are generic and often wrong for my area	Most apps show city-wide data, not hyper-local data	Unprepared and frustrated
PS-2	A student or working professional	Decide what to wear and carry	I must interpret raw numbers myself	Apps show data, not clear advice	Confused and inconvenienced
PS-3	A traveller or outdoor planner	Avoid disruption from rain or storms	Alerts come late or not at all	Warnings are not personalised to my plans	Anxious and at risk

Problem Statement Summary

Users need a weather assistant that gives accurate, location-based forecasts and turns them into simple, timely, actionable insights. Weather Wise AI aims to close this gap using AI.
