

Modules and Implementation

Weather Wise AI is built in modules so each feature can be developed and tested separately.

Module	Responsibility	Key tasks
Location module	Finds the place the user wants	City search, location detection, input validation
Weather module	Gets weather data	Call the weather API, parse current and forecast data
AI insight module	Creates guidance	Build the prompt from weather data, call the AI model, format the reply
Alert module	Warns the user	Check thresholds for rain, storm and heat, show alerts
Interface module	Shows results	Dashboard, forecast cards, insight card, saved cities
