

3. Empathy Map Canvas

Target User

Everyday users (commuters, students, professionals and travellers) who rely on weather information to plan their day.

Says, Thinks, Does, Feels

SAYS	THINKS
"Will it rain when I leave?" "Is this forecast even right?" "What should I wear today?"	I wish the forecast was more accurate for my area. I don't have time to read charts and numbers. I want advice, not just data.
DOES	FEELS
Checks several weather apps. Looks at the sky to double-check. Carries an umbrella just in case.	Frustrated by wrong forecasts. Anxious about sudden rain or storms. Relieved when alerts arrive on time.

Pains and Gains

PAINS	GAINS
Inaccurate or generic forecasts Late or missing alerts Hard-to-understand weather data Too many apps to check	Reliable hyper-local forecasts Timely, personalised alerts Simple AI-generated advice One trusted app for everything
