

Technology Stack

Layer	Technology	Purpose
Frontend	HTML, CSS, JavaScript or Streamlit	User interface and dashboard
Backend	Python (Flask or FastAPI)	Handles requests and business logic
Weather data	Weather API (for example OpenWeatherMap)	Current conditions and forecasts
AI layer	Large language model API	Natural-language weather insights
Storage	Local storage or lightweight database	Saved cities and cache
Tools	Git, VS Code, Postman	Development, version control and API testing

The stack can be adjusted based on what the team finalises during development.
